Message Of The Chairman

Turgay Tanes

Chairman, GYODER

The market growth acted as a morale booster

The growth witnessed in both Turkish economy and developed countries in the first quarter of 2010 has boosted the morale. Especially, the growth of Turkish economy by 11.7 percent has enhanced economic trust and expectations. However, concerns have also arisen to the effect that economic recovery shall slow down worldwide due particularly to European-sourced new risks.

After the trough, a new wave of recession in construction, housing and real estate sectors as well as deterioration in some of the other operations in the countries of European Union (EU) has been witnessed. As to Turkey, it is pleasing to see that the construction sector has a shift towards positive values by a growth of 8 percent for the first time after eight quarters. However, this growth in the sector has merely compensated quite a small part of the loss incurred throughout the preceding two years.

In the first quarter of 2010, the figures of new housing construction licenses and housing sales have also remained below the general economic growth. There is a general stagnation of house prices and rents and an increasing demand and recovery in the housing loans extended. This reverse movement stems from the fact that the results of the extended loans are not simultaneously reflected on the housing sales and the effects of the past big crisis still survive.

Recent dynamism in the economic activities has also contributed to revitalization of the commercial real estate market. Suspended Shopping Center investments have gained speed again with the increase in the retail spending, increasing demand by the office users. The data in our study as well as the trends they indicate show that Turkish Economy shall continue its relatively fast growth in the second half of 2010 when compared with other many countries affected adversely by the crisis, which will in turn support the real estate sector in terms of both supply and demand.

GENERAL EVALUATIONS AND EXPECTATIONS

WORLD ECONOMY

Growth and risks both felt together in the developed countries

Almost all developed countries in the world economy has shown growth in the first quarter of 2010. While the growth is relatively faster in Japan and the USA, European Union and Euro area have remained behind. The growth in the first quarter is accompanied with particularly financial and economic risks arising from the European area. Especially due to the risks emerged in the second quarter of the year, the fluctuations in the financial markets and downfall in the financial indicators appeared.

The countries have adopted to take and implement measures in accordance with their own problems and priorities for the remaining part of the year. The central banks have continued their low-interest policies and will maintain the low interest rates throughout the year. The global recovery shall slow down in the remaining part of the year due to the economic and financial risks appeared in the second quarter of the year.

CONSTRUCTION HOUSING AND COMMERCIAL REAL ESTATE SECTOR IN THE WORLD

Recession again in the USA and Europe

Upon the fierce recession in the operations of the housing and real estate sector, the source of the global crisis, we have obtained data suggesting return from the trough in the last quarter of 2009. However, a new stagnation and recession tendency appeared in the construction and real estate business in the USA and Europe in the first and second quarters of 2010.

While the housing construction spending has increased in the USA, the off-house building constructions spending continue to contract. Improvement in the US housing sales and prices also slowed down in the new year. Contraction in the operations of the entire construction sector in European Eurozone has gained speed again in the first quarter of the new year. As to the operations in the commercial real estate sector, after bouncing from the trough in the last quarter of 2009, it stagnated in the first quarter of the new year.

GENERAL EVALUATIONS AND EXPECTATIONS

TURKISH ECONOMY

Economy showed a quick growth in the first quarter

Having contracted during a period of four quarters successively with the effect of the global crisis, the Turkish economy switched to a re-growth by 6 percent in the last quarter of 2009 with the growth stepped up in the first quarter of 2010 by 11.7 percent. The preliminary indicators show that the economic growth, although slowed down, has also continued in the second quarter of the year. The growth has been caused rather by private consumption and investment expenditures. Among other economic indicators, while the inflation, budget deficit and unemployment retreated, the growth-related current deficit showed an increase.

CONSTRUCTION HOUSING AND COMMERCIAL REAL ESTATE SECTOR IN TURKEY

Construction sector grew again after eight quarters

Having been subject to contraction for a successive period of eight quarters, the construction sector grew by 8 percent in the first quarter of 2010. However, significant recession has occurred in the housing construction licenses, building licenses and housing sales. And the housing loans utilized increased significantly in the second quarter. Furthermore, a relative upturn was witnessed in the commercial real estate sector. While the number of shopping centers, newly opened and existing, has increased, the office vacancy rates retreated in the first quarter of the year for the first time after the crisis.

FIRST QUARTER AT A GLANCE

1

While the US economy grew by 2.5 percent, the growth in Euro area remained at 0.5 percent

2

Combined leading indicators indicate a slowdown in the economic recovery.

3

Recovery in the expectations and confidence indices slowed down in the USA and EU.

4

Construction spending contracted in the USA. A limited increase seen in the house prices.

5

Operations of the construction sector in European Euro area contracted by 10 percent.

6

Commercial real estate prices index in the USA increased from 108 to 111.

7

Turkish economy grew by 11.7 percent.

8

TR Central Bank kept the interest rate at 6.5 percent.

9

Number of housing construction licenses issued, which is 132,520 retreated.

10

Housing loan stock increased by TRY 2.4b and TRY 3.9b in the first quarter and second quarter, respectively.

11

95,571 new housing loans were extended in the first quarter.

12

Housing loan is below 1 percent, with a monthly interest rate of 0.97 in average.

FIRST QUARTER AT A GLANCE

13

House sales, 85,857 in total, proved to be the lowest of the last nine quarters.

14

Total number of shopping centers reached to 221 with new 5 shopping centers and size of the total leasable area increased to 5,46 million m² (by the end of the second quarter).

15

Household consumption expenditures grew by 9.9 percent.

16

Vacancy rates of A and B type office for CBA (center business area) in Istanbul office market retreated for the first time after the crisis.

17

Size in m² of the building licenses issued for new office, industrial and logistic buildings retreated significantly.

18

Real estate sale to foreigners was USD 566m. Direct foreign capital investments went down to USD 47m.

19

Construction sector grew by 8 percent for the first time after eight quarters. Private sector construction expenditure showed substantial rise.

20

Construction costs index leaped forward by 5 points in line with the growth in the construction sector.

I. WORLD ECONOMY

Growth was seen in all developed countries in the second quarter

■ For the first time after the crisis, growth has been recorded in all developed countries in the first quarter of 2010. While the US economy grew by 0.1 percent in the last quarter of 2009 for the first time, the growth increased by 2.5 percent in the first period of 2010. In the Eurozone and Japan, the growth has been recorded in the first quarter of 2010 for the first time after the crisis. Growth rate of China accelerated with 11.9

percent. As the fiercest contractions with the effects of the crisis were witnessed in the first quarter of the last year, an important base effect was felt on the growth of the first quarter of this year.

SOURCE: OECD

Leading indicators show slowdown in the economic recovery

■ The leading indicators hint at a slowdown for recovery in the world economy. The increase in the OECD combined leading indicators started to decelerate. In the second quarter of the year, the transportation index -a significant indicator for the global business- went down nearly to those before the crisis with 2,713.

(DATA AS OF LAST MONTH OF THE QUARTER PERIOD)

Fluctuations in the financial indicators

■ Fluctuations occurred in the financial indicators in the second quarter of the year in line with the international economic development. Especially, due to Europe-based new financial risks, the security exchanges in the developed countries entered in a new retreating trend. In the period, the most important development was the quick change in Euro-USD parity and depreciation of Euro. The central banks in the developed countries still keep the interest rates at the lowest levels. While gold prices increased due to the financial risks in the second quarter, the expectation of slowdown in the economy caused the oil prices to retreat.

Recovery in the expectations and confidence indices slowed down

■ Although the expectations and consumer confidence indices in the real sector continued to increase compared to the year-end of 2009, the improvement has slowed down. Index levels have exceeded the levels before the crisis. Both real sector and consumer confidence in USA have also increased in the second quarter of the year. In the European Union, a limited decrease occurred due to the economic and financial developments in the expectations and confidence indices. China has gone through a retreat in the expectations and confidence indices in the second quarter of the year.

II. CONSTRUCTION AND HOUSING SECTOR IN THE WORLD

Construction expenditures remain weak in the USA

■ In the USA, the housing construction expenditures and off-housing building construction expenditures continued to remain weak in 2010. After a limited retreat in the housing construction expenditures in the first quarter of 2010, this time a limited increase was seen in the second quarter. Downfall in the off-housing building construction expenditures also continued in the first quarter of 2010, and the retreat came to a halt in the second quarter according to data by April.

Recovery slowed down in the us housing sector

■ Recovery in the US Housing sector data slowed down in the new year. New housing sales in USA plunged in May to the lowest level of previous years. However, the existing housing sales increased. On the other hand, in these sales, the sales by those that have difficulty to pay back loan had strong effect. And the housing prices, after recovery in the third quarter of 2009, retreated again till the end of the quarter in 2010 with a limited increase again in April.

Contraction of the construction sector in eurozone gained speed in the first quarter of the year

■ Contraction in the construction operations in 16 countries located in Eurozone continued. The retreat in the construction operations accelerated in the first quarter of 2010. While the total construction operations reduced in the first quarter by 10 percent, the reduction in the housing constructions was 9.3 percent and in the off-housing building constructions 12.7 percent.

III. COMMERCIAL REAL ESTATE SECTOR IN THE WORLD

Cautious and stable markets after the bottom

■ Quick contractions in the commercial real estate sector that have continued for four quarters successively after the global crisis left its place to a contraction and signs of return from the bottom in the last quarter of 2009. And in the second quarter of 2010, the asset prices and proceeds have shown an increase, albeit limited, for the first time. With the growth in the economic operations in the first quarter of the year, the demand towards the commercial real estate started to evolve again. With this demand, we see new balances are established in 2010. And the increase seen in the across-border commercial real estate investments (purchases) in the last quarter of 2009 for the first time compared to the preceding quarter continued in the first quarter of 2010 as well.

Quick growth in Turkish economy

■ Turkish economy grew by 11.7 percent in the first quarter of 2010. The manufacturing industry grew by 20.6 percent and the trade by 22.4 percent in the first quarter of 2010. Behind the quick growth, lies the base effect of the significant reduction in the same period of the last year. Together with the data on growth, powerful expectation of growth continued for the entire year.

(DATA AS OF LAST MONTH OF THE QUARTER PERIOD) (1) MAY (2) APRIL

Recovery in the main indicators

■ In the second quarter of 2010, the main economic indicators, except for current deficit value, show recovery. Inflation switched to a retreat trend again in the second quarter, going down by 9.10 percent. And in the budget deficit, the recovery depending on the economic growth continues. While the economic growth caused expansion of the current deficit, the unemployment maintains its high level. The Central Bank keeps the interest rate at 6.5 percent whereas the USD exchange rate reached to TRY 1.58 under the parity effect.

Consumer Confidence Continue To Increase

■ The consumer confidence index data in Turkish economy shows that the consumer confidence has a tendency to increase in the New Year. Closed the year at 78.80, the consumer confidence index increased to 86.58 in May. And the real sector confidence index also showed a significant increase in the first quarter of the year. The increase continued till April in the second quarter and the index, after reaching to the level of 118.8 in April, went down in May and June, closing the semi-year at a level of 111.7.

V. HOUSING SECTOR IN TURKEY

The housing construction licenses issued showed retreat in the first quarter

■ Number of the housing construction license and number of building occupancy permits issued in the first quarter of 2010 reduced compared to the last quarter of 2009. The number of housing construction license by apartments realized as 132,520. And the building occupancy permits were issued for 73,795 apartments, representing the lowest figure in the last nine quarters. The data shows slowdown in the housing sales and, consequently, start of new housing constructions.

Revitalization in the utilization of housing loans in the first quarter

■ In the first quarter of the year, the housing loan demand and housing credit utilization revive. Number of loan extended in the first quarter was 95,571 in number with loan amount of TL6,54b. Leaving aside the loan utilization affected by the loan renewal/change trend in the last quarter of 2009, powerful loan utilization realized in the first quarter of 2010.

Low level in the housing loan interest rate continues

■ Low levels in the housing loan interest rates were maintained in the second quarter of the year; however, a limited increase was seen in the monthly average interest rate. It is seen that the banks have made some upward and downward adjustments in the housing loans in the second quarter. Despite of the increase in the deposit interest, the monthly average interest rate of the housing credits remained below 1 percent against the existing trend in the interest rates of the Central Bank and expectations.

DATA AS OF LAST MONTH OF THE QUARTER PERIOD

Share of medium term loans in the housing loans increases

■ Share expansion of the medium term loans in the housing loans continued in the second period of the year as well. The term group that expanded its share in the second quarter was the term group of 61-120 months' loans. Share of the loans with the term of 6-10 years increased 1 point, reaching to 49.9 percent. The share of the loans of other term groups has shown limited increase. Although the loan interests reduced relatively to the lowest levels, the demand for loans for 10 years and above still remains limited.

DATA BY LAST MONTH OF THE QUARTER PERIOD (1) APRIL

Reduction in the housing loans to be liquidated

■ Reduction in the housing loans to be liquidated still continues. After reaching the peak in the third quarter of 2009, the housing loans to be liquidated because of conditions caused by the economic crisis started to retreat. The reduction continued in 2010 as well. While the housing loans to be liquidated went down to TRY691 m by April, the share of the loans to be liquidated in the total loans extended decreased to 1.52 percent. However, this rate is still higher than the pre-crisis levels.

SOURCE: TURKISH STATISTICAL INSTITUTE

Housing sales contracted in the first quarter

■ Housing sales reduced significantly in the first quarter of 2010 and the lowest sales of the last nine periods, including the crisis period, have realized. The housing sales across Turkey realized as 85.857 units. The sales were 18.994 units in Istanbul, 40,380 in the three major cities, including Istanbul and 45,477 in other cities. Reduction in the housing sales also affects the housing demand expectations for the entire year as well.

Fluctuation in the tendency of the consumers in purchasing houses

■ The fluctuation in the tendency of the consumers in purchasing houses continues. While the reduced tendency of house purchase in the crisis period showed quick increase in the second quarter of 2009, it went on weaker in the remaining part of the year. In the first quarter of 2010, the tendency of the consumers to purchase house increased again with 9.30; however, the trend weakened in the second quarter by May.

Limited increase in the housing prices ceased

■ The housing prices across Turkey which reduced with the effect of the economic crisis and entered to a stable, but limited increase trend from the second quarter of 2009 stagnated in the second quarter of 2010. When considered on basis of cities, while we see that the limited increase in the housing prices in Istanbul continues, there is a limited reduction in the housing prices in other cities.

House rents throughout Turkey have not changed for the last five quarters

■ After significant reduction with the effect of global crisis, the house rents throughout Turkey showed a leap in the second quarter of 2009. After this leap, the house rents across Turkey have not changed for the last five quarters, except for very limited fluctuations. The limited reduction in the first quarter of 2010 was followed by a very limited increase trend in the second quarter.

VI. COMMERCIAL REAL ESTATE SECTOR IN TURKEY

SHOPPING CENTERS

Deferred investments in shopping centers revitalize

■ From the beginning of 2010 on, SC investments and projects revitalized. The growth of economy and recovery of the domestic demand triggered the SC investments, deferred and postponed in the crisis period. Investment appetite of local and foreign investors in Istanbul and other cities arises again.

However, SC rents offered to the users in the new period are at lower level compared to the pre-crisis period. The retail users show demand for new SCs to benefit from this advantage. Furthermore, on the retail part, new foreign retail-fashion companies continue their interest and entry in Turkey.

Rapid increase in the household consumption expenditures

■ Household consumption expenditures showed a rapid increase in the first quarter of 2010 compared to the same period of the preceding year. The consumption expenditures have grown by 9.9 percent in the first quarter of the year. Considering the household expenditure groups, while the furniture and home appliances and clothing expenditures increased compared to the preceding quarter, the food and entertainment-cultural expenditures retreated.

DATA BY LAST MONTH OF THE QUARTER PERIOD (1) MAY

Purchasing tendency of the consumer strengthens

■ The consumer confidence index increased in 2010 and the consumer confidence index increased by 7.8 points approximately by the end of May, reaching to 86.8 points, consequently, the purchasing tendency of the consumers gained strength significantly. And the tendency of the consumers towards the semi-durable consumables and durable consumables has also increased. Optimism of the consumers for the general economic status has also improved.

SOURCE: AMPD NIELSEN RETAIL INDEX

DATA BY LAST MONTH OF THE QUARTER PERIOD (1) APRIL

Limited increase in the total turnover index of the shopping centers

■ Closed the year 2009 at the peak level, the shopping centers turnover index has had tendency to increase in the first quarter of 2010 compared to the same period of the last year. On the other hand, there is stagnation in the turnover index in the beginning of the second quarter. With the new SCs opened, the leasable area index continued to expand. The turnover per m2 index maintains the levels of the same period last year.

ISTANBUL OFFICE MARKET

User demand for lease in the office market recovers

■ We see hints at revitalization in the lease in Istanbul office market after the crisis. And, consequently, there is a reduction in the vacancy rates for office types of A and B in CBA for the first time. And in the off-CBA, there is a limited increase in the office vacancy rates. Here new supplies added to off-CBA have also had an effect. We see a limited reduction in CBA and off-CBA.

In Istanbul office market, the investments in off-CAB, particularly in the areas with the expanded supply of type B office, help the demands continue for these locations. However, type B office demand of the users that do not want to pay high rent or plan to change place cannot be met sufficiently. Şişli-Bomonti on the European side with urban transformation close to CBA and Ümraniye and Kavacık-İçerenköy route on the Anatolian side attract demand as new office locations. It is seen that there is a strong demand for movement into Ümraniye.

In 2010, the office investments shall continue to be the preferred investment area, second to hotel investments.

CBA vacancy rates retreated for the first time after the crisis

■ Office vacancy rates caused by the economic conditions as a result of the crisis started to increase from the second quarter of 2008 on and the increase continued till the last quarter of 2009. In the first quarter of 2010, a reduction, although limited, was seen in the Type A and B office vacancy rates. And in the off-CB, the increase in the vacancy, albeit limited, continued.

Limited reduction in the office rents in the first quarter of the year

■ The office rents, stagnated for the last three quarters, showed a limited reduction in the first quarter of 2010. A limited reduction occurred in the rents of office types A and B in CBA. And the rents of office type A in off-CBA remained almost the same in the first quarter. And the rents of office type B in off-CBA reduced to a limited extent. That the rents are lower compared to the pre-crisis period with respect to new leases causes limited reduction in the average rents.

Reduction in the office building investments and slowdown in the supply

■ While investments in the office buildings reduced in the first quarter of 2010 across Turkey, the supply showed a slowdown. The total volume of building licenses issued for the office buildings in the first quarter

Office (Business) Building Construction Licence And Building Occupancy Permit In Turkey

PERIOD	OFFICE BUILDING CONSTRUCTION LICENSES ISSUED M ²	OFFICE BUILDING OCCUPANCY PERMITS ISSUED M ²
2008 Q1	762.095	596.898
2008 Q2	1.113.919	510.131

2010 Q1	675.534	477.452

SOURCE: TURKISH STATISTICAL INSTITUTE

was 675 thousand m² and the building licenses gave the lowest number for the last nine quarters, including the crisis period. The total volume of building occupancy permit issued in the first quarter of the year was 477 thousand m². After the increase in the last quarter of 2009, there occurred a slowdown in the supply of offices in the first quarter of 2010.

INDUSTRIAL AND LOGISTIC AREAS

Effect of economic growth on the logistic areas is limited

■ The real estates most affected by the contraction in the economy are logistic areas and industrial areas. The contraction in the industrial production, foreign trade and retail sales has affected the demand for logistic and industrial areas adversely, resulting in a reduction in the investments and rents in the first three quarters of the year.

Started in the last quarter of 2009 and gained strength in the first quarter of 2010, the expansion in the economic activities depending on the economic growth still merely fulfills the idle capacities. In the first quarter of 2010, the lease demands in the logistic area and industrial area started again; however, no increase has been seen in the rents yet. It is anticipated that the vitalization in the economic activities shall continue and the demand for lease of logistic area shall increase gradually in the remaining part of the year, but the rent rises shall remain limited.

New industrial and logistic building investment slowed down in the first quarter

Industrial And Warehouse Buildings Construction Licenses Issued Across Turkey

DATA BY LAST MONTH OF THE QUARTER PERIOD (1) APRIL

Corporate loans started to reduce in the second quarter

■ Corporate loans used in the real estate sector have showed different trends in the first quarter of 2010 and started to reduce in the beginning of the second quarter. While the local loans utilized by both construction sector and real estate investors increased in the first quarter, the loans they obtained from abroad reduced. According to the April data, the local and foreign loans utilized by the investors in the construction sector and real estate in the second quarter of the year started to reduce. The slowdown in the loan utilization is a leading indicator for slowdown in the activities.

2010 Q1	566	47

SOURCE: UNDERSECRETARIAT OF TREASURY, REPUBLIC OF TURKEY

REDUCTION IN THE DIRECT FOREIGN INVESTMENTS

■ Direct capital investments in the real estate sector have a tendency to reduce. While the investment injection was USD81m in the last quarter of 2009, it went down to USD47m in the first quarter of 2010. The direct investment injection in the quarter periods of 2009 -the year of the crisis- realized as the lowest in the second quarter with USD51m. The performance of the first quarter in 2010 started even below the year 2009. The difficulties experienced by the European real estate investors have also influenced this reduction.

VIII. CONSTRUCTION SECTOR IN TURKEY

Construction sector grew for the first time after eight quarters

■ The construction sector, sized down for the last eight quarters, grew again in the first quarter of 2010 for the first time. While the general economy grew by 11.7 percent in the first quarter of 2010, the construction sector also grew by 8 percent. The construction sector showed a reduction by 18.6 percent in the same quarter of the last year. For this reason, despite of the growth for the first time after eight quarters, the construction sector merely compensated half of the loss it has gone through in the first quarter of the last year.

Increase in the private sector construction expenditures and reduction in those of the public sector

■ While a significant increase occurred in the construction expenditures of the private sector in the first quarter of 2010, a powerful reduction was seen in the construction expenditures of the public sector. The private sector construction expenditures amounting to TL14.5bl ended the reduction in the crisis period. However, the public sector construction expenditures amounted to TL4.8bl, remaining well below the crisis period. While the driving power of the construction sector was public sector in 2009, this role shall be played by the private sector in 2010.

DATA AS OF LAST MONTH OF THE QUARTER PERIOD

Increase in the construction sector employment

■ With 1.26 million persons in the first quarter of 2010, the construction sector employment increased by 150 thousands compared to the same period of the last year. In the first quarter of 2010, employment increased, particularly due to the expansion in the private sector construction investments. The share of the construction sector employment in the total employment reached 5.8 percent as well.

Leap in the construction cost in the first quarter

■ In the first quarter of 2010 which showed an increase in the construction sector for the first time after eight quarters, the construction materials also showed a significant upturn. While the construction costs that reduced after the third quarter of 2008 following the crisis have been stable for the last three quarters, they increased in the first quarter upon revitalization of the construction activities. The increase has been witnessed both in labor and material costs.

DATA AS OF LAST MONTH OF THE QUARTER PERIOD (1) MAY

Ease in the financial indicators in the second quarter

■ The increase seen in the first quarter of 2010 was replaced by ease in the second quarter. The financial indicators in Turkey showed reduction due to the economic developments and increased financial risks internationally in the second quarter of the year. Total assets volume of the banking sector reduced together with ISE market value and portfolio investments of the foreigners. The foreign debt stock of Turkey tends to decrease, too.

About GYODER

GYODER, The Association of Real Estate Investment Companies, was established in 1999 by the existing 12 REICs to promote the real estate industry in Turkey. The Association acts as a platform in introducing and maintaining standards and quality, providing training, networking, and acting as spokesman in relations with media and public authorities.

The conferences, meetings, seminars, symposiums, panels and education programs GYODER has organized are seen as major meeting platforms for the players in the sector. GYODER is also representing the Turkish Real Estate Sector in foreign associations, institutions, exhibitions, fairs and conferences with globally known EPRA, NAREIT, MIPIM, Real Vienna, ULI, Barcelona Meeting Point and Expo Italy.

Being organized by GYODER firstly in 2000, the series of Turkish Real Estate Summit have become the sector's traditional meeting and idea sharing events with their international participants of developers, investors, financial institutions, planners, architects and academics.

It has been GYODER's vision since the establishment of the Association to integrate these resounding and successful summits with a real estate exhibition. In 2009 GYODER joined forces with the leading worldwide company, Reed Exhibitions to organize Turkey's first regional real estate and investment fair: ISTANBUL REstate. As a first with its concept, the Turkish Real Estate Summit is being held together with ISTANBUL REstate Real Estate and Investment Fair since 2009.

GYODER also organized Developing Cities Summit in order to present investment opportunities in developing cities to sector representatives and to help cities to reach out to national and international real estate investors. The first of the Developing Cities Summit was organized in January 2010 in Bursa in cooperation with Bursa Metropolitan Municipality.
